

Assignment: Registration Form Development

Objective: Design and implement a registration form using HTML, CSS, and JavaScript to collect user information and send an email based on the collected data.

Requirements:

1. HTML Form:

- Create an HTML form with fields to collect the following information:
 - First Name
 - Last Name
 - Email Address
 - Phone Number
 - Date of Birth
 - Address
 - Major
 - Attachment(CV Document): pdf, word files
- Include appropriate input types (text, email, date, etc.) and labels for each field.

2. CSS Styling:

- Style the form using CSS to make it visually appealing and user-friendly.
- Ensure proper layout and alignment of form elements.

3. JavaScript Functionality:

- Implement JavaScript to perform client-side form validation.
- Validate required fields to ensure they are not left blank.
- Validate email format.

4. Email Sending:

- Upon successful form submission, gather the entered data.
- Use JavaScript to send an email containing the collected information.
- The data will be send to my email address:
abdalrahman.marshoud@gmail.com

Submission Guidelines:

- Submit your assignment as a compressed file containing HTML, CSS, and JavaScript files.
- Include clear comments in your code to explain the purpose of each section
- Attachment is bonus to do not mandaitory
